

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. **(Cancelled)**
2. **(Cancelled)**
3. **(Currently Amended)** The method according to Claim ~~2~~,
7, wherein said transport of said print material (2) is by a transport belt (1) which is a conveyor belt.
4. **(Currently Amended)** The method according to Claim ~~2~~,
7, wherein said transport belt (1) is heated by a heat source associated with the transport belt (1).
5. **(Cancelled)**
6. **(Currently Amended)** ~~The method according to Claim 5,~~
A method for transporting a print material (2) covered on the front side with toner for printing on the back side, comprising the step of: transporting print material (2) through a heater for pre-fusing toner on the front side of the print material (2), and thereafter transporting the print material (2) for printing on the back side thereof
wherein said print material (2) covered on the front side with toner is heated to fusing temperature over the toner glass transition temperature, prior to the back printing and the print material (2) is heated after the back side printing only to a lower temperature than the fusing temperature.

7. **(Currently Amended)** ~~The method according to Claim 5,~~
~~wherein~~ A method for transporting a print material (2) covered on the front side with
toner for printing on the back side, comprising the step of: transporting print material
(2) through a heater for pre-fusing toner on the front side of the print material (2) by
heating over the toner glass transition temperature, and thereafter transporting the
print material (2) for printing on the back side thereof, wherein said toner is heated by
a transport belt (1) for the print material (2), said transport belt (1) is being heated to
different degrees at different locations.

8. **(Currently Amended)** ~~The method according to Claim 5,~~
~~wherein~~ A method for transporting a print material (2) covered on the front side with
toner for printing on the back side, comprising the step of: transporting print material
(2) through a heater for pre-fusing toner on the front side of the print material (2) by
heating over the toner glass transition temperature, and thereafter transporting the
print material (2) for printing on the back side thereof, said heating temperature being
selectively controlled by measuring said heating of the print material (2), is measured
and heat is fed to the print material (2) in a controlled manner on the basis of the heat
measurement.

9. **(Cancelled)**

10. **(Cancelled)**

11. **(Currently Amended)** ~~The transport apparatus (4) according~~
~~to Claim 10,~~ A transport apparatus (4) for transporting print material (2), comprising:
a transport belt (1), at least one heat source, associated with said transport belt (1), for
pre-fusing toner on the front side of print material (2), transported by said transport
belt (1) by heating the toner over the toner glass transition temperature before back
side printing, and a switch for returning transported print material for back side
printing, wherein said at least one heat source includes resistance wires (20) in said
transport belt (1).

12. **(Original)** The transport apparatus (4) according to Claim 11, wherein said resistance wires (20) are parallel to the direction of motion of the transport belt (1).

13. **(Original)** The transport apparatus (4) according to Claim 11, wherein said resistance wires (20) are perpendicular to the direction of motion of the transport belt (1).

14. **(Currently Amended)** The transport apparatus (4) according to Claim ~~10~~, 11, wherein said at least one heat source includes a screen.

15. **(Original)** The transport apparatus (4) according to Claim 14, wherein said screen includes individually controllable resistance wires (20).

16. **(Original)** The transport apparatus (4) according to Claim 15, wherein said controllable resistance wires (20) include titanium and/or tungsten.

17. **(Original)** The transport apparatus (4) according to Claim 10, wherein said at least one heat source includes perforated plates.

18. **(Original)** The transport apparatus (4) according to Claim 10, wherein said at least one heat source includes heater bands which can be bonded onto said transport belt (1).

19. **(Original)** The transport apparatus (4) according to Claim 10, further including a shaft encoder (15) on a drive roller (7, 7') for said transport belt (1) for sensing transport belt speed, and a controller (25) for switching off said at least one heat source when said transport belt (1) stops.

20. **(Currently Amended)** The transport apparatus (4) according to Claim ~~9~~, 11, further including fusing rollers (10, 10'), downstream of said transport belt (1), which can be swiveled into operative relation with a transport path (14) for the print material (2) and swiveled to a position remote from the transport path (14).
